

Setting Up ChatterEmail™

Setting Up ChatterEmail On Your Treo

If you have not loaded ChatterEmail on your Treo, do the following in order to load the software on your Treo for a free 30 day trial.

1. Go to your Treo's built in browser.
2. Type get.chatteremail.com in the URL section.
3. Accept the Palm installer application into applications.
4. Select **Save** and **Open** and do not change the location of the ChatterEmail download.
5. Select **Run**.
6. Ignore the Free IMAP account offer.
7. Tap under "Choose the account type..." in the drop-down menu and select **Generic IMAP Account** or **Generic POP3 Account**.
8. In the Account Definition window, enter the following information:
 - **Name** — Enter a name for the mailbox. This should be 10 or fewer characters.
 - **IMAP/POP3 Server** — Choose one of the following:
 - **POP3 Server** — Enter the following POP server name: pop.emailsrvr.com
 - **IMAP Server** — Enter the following IMAP server name: imap.emailsrvr.com
 - **Login Name** — Enter your full email address (e.g., myname@mydomain.com), using all lowercase letters.
 - **Password** — Enter the password for your email account.
9. If you are using an IMAP server, enter the following folder name in the Complete Server Folder Name box: INBOX
10. Tap the **SMTP** tab.
11. Enter the following information:
 - **Server** — Enter the outgoing server name and its alternate port: smtp.emailsrvr.com:587

- **Login Name** — Enter your full email address (e.g., myname@mydomain.com), using all lowercase letters.
- **Password** — Enter the password for your email account.

12. Check the **PLA/N** box.
13. Tap the **OK** button.
14. Tap the **OK** button.

Setting Up A Mail Account If You Already Have ChatterEmail

1. Tap the **Menu** button to activate the main menu.
2. Select **New Account** from the box menu.
3. Follow steps 7 - 14 from above.

Assigning SSL Secure Server Settings

After setting up your mail account, you can follow the steps below to use the secure (SSL) server. The SSL protocol allows you to send and receive secure email messages.

1. Tap the **Menu** button to activate the main menu.
2. Select **Edit Mailbox**.
3. Tap the **Define** tab.
4. In the POP3 Server or IMAP Server box, enter the secure server name: secure.emailsrvr.com
5. Tap the **Deliver** tab.
6. Check the **Use SSL** box.
7. Tap the **SMTP** tab.
8. In the Server box, enter the secure server name: secure.emailsrvr.com
9. Check the **SSL** box.
10. Tap the **OK** button.
11. Tap the **OK** button.

Comparing POP and IMAP

POP

- Best when you will be primarily accessing your email from a single location, like your office or home.
- Messages are downloaded to your computer, so you don't need to worry about exceeding the size of your mailbox.
- When accessing your email account through a web browser, you may not see previous messages that were downloaded to your desktop email client.

IMAP

- Best when you will be accessing your email from multiple locations.
- Allows you to create portable folders. These folders will appear in each email client you use to access your account. Your account will look the same at work, at home, and at your friend's house.
- Because your email messages are stored on the server, you must monitor your mailbox size. You may need to delete messages periodically.
